

Comments for FERC Scoping Meeting, 18 March 2015 (meeting ended before these comments were presented)

My name is Ron Enders. My wife and I own a home and 47 acres. Our right of way to Route 151 is in our neighbors deed.

Dominion proposes to build the pipeline to cross VA 151 at our driveway entrance, where the school bus stops, and go through our ford and bridge across Goodwin Creek, my neighbors septic system, garden and fields, then my field and pond before crossing Goodwin Creek again.

This route is intended to go around the rock mountain and cliff on 151. Goodwin Creek flows parallel to 151 and curves around the cliff.

The natural ford has provided access to the neighborhood for longer than known history. The bridge was build after Hurricane Camille.

The neighborhood of 95 acres has 4 houses and several additional building rights. Emergency services and heavy truck traffic is made through the ford and automobile traffic across the bridge.

If at any time during the construction process the access to the

bridge or ford were blocked there would be no routine or emergency access to and from the entire neighborhood.

If the pipeline construction damages or destroys the ford there will be no emergency or truck access. If the bridge is damaged or destroyed there will be no automobile access. If there is an accident on the pipeline which affects the bridge and ford there will be no evacuation or rescue route for the entire neighborhood.

In order for the pipeline to get around the solid rock cliff it appears they will destroy our pond and still enter part of the steep cliff wall which is almost vertical. Besides destroying the pond the damage to the creek because of the steep grade will be substantial.

When the head surveyor for Nelson (at the time) came to show me the route on his computer, we walked on the properties and looked at the pond, the cliff, the ford, the bridge, septic field, garden and the entrance on 151. I was told at the open house his report is on file at Dominion. No one has had the courtesy to contact me about an environmental or access solution.

The pipeline will destroy our neighborhood, future

development, value, pond, ford, bridge, creek, septic field, and view shed and because you give Dominion federal power of eminent domain we will lose the right to a local jury to determine fair compensation. An environmental and economic catastrophe.

All Pain...No Gain
