

Senator Tim Kaine  
388 Russell Senate Office Building  
Washington, DC 20510

Senator Kaine:

Thank you for your communication with the Federal Energy Regulatory Commission (FERC) seeking to make their review process more accountable to public concerns. As you know, Commissioner Norman Bay refused your request for further scoping meetings because, in FERC's opinion, "additional meetings would not be likely to bring new matters to light." The dismissal of everything that might be said at future meetings is indicative of FERC's overall unresponsiveness to property owner and community concerns. Even worse, the transcript of what *was* said at Nelson's public scoping meeting on March 18 (recently posted on FERC's website) is so garbled that it is incomprehensible.

The garbled transcript and the ridiculously short period of only 2 weeks to review thousands of legitimate scoping period queries regarding safety, threatened water supplies, diminished property values, inappropriate use of eminent domain, economic disruption, alternatives routes, environmental damage, climate change, and ultimate need for the pipeline—shed light on why it is no wonder that ACP, LLC's "response" fails to address the public's concerns in any comprehensive or satisfactory way.

As I witness this flawed regulatory process proceeding, my concerns are growing. The following common sense measures—identified by major organizations, government agencies, and others in my community—would go a long way toward making the regulatory process more responsive and effective at protecting the public.

I ask you to demand that FERC:

- Analyze *in a single, comprehensive Environmental Review* the cumulative effects and the market demand for all four pipelines proposed to go through the central Blue Ridge and Appalachian Mountain region of Virginia and West Virginia
- Reject any route that threatens National Forests and Parks, the Allegheny and Blue Ridge Mountain region, agricultural-tourism zones, rare or endangered species, critical waterways and wetlands
- Prioritize meeting new energy demand through renewable sources, increased energy efficiency, by upgrading existing pipelines and infrastructure, or co-locating new pipelines within existing utility or road corridors
- Acknowledge that eminent domain is being used to acquire rights of way in *every* case along the route of the ACP. Property owners are given no choice regarding the pipeline on their property, thus feel forced to negotiate for compensation.

It is unjust for the ACP, LLC—a private business venture—to be anointed with the extraordinary power of eminent domain to take private property from taxpaying citizens (your constituents). This pipeline will do enormous harm to the unwilling recipient communities and individual property owners. We depend on you, our elected representative, to ensure the regulatory process is thorough, equitable, and moral—and that all harms are weighed against the professed benefits.
