

# THE CASE AGAINST THE ATLANTIC COAST PIPELINE

StopTheACP.org

## THE ATLANTIC COAST PIPELINE SCHEME

- The Atlantic Coast Pipeline (ACP) is a proposed 604-mile natural gas pipeline that would run from West Virginia to Virginia and North Carolina. Dominion Energy and Duke Energy are the primary owners of the project, and Dominion is responsible for its construction.
- The ACP is not the result of arms-length dealing between independent companies. Dominion and Duke own both the pipeline builder and the electric utilities that will use the pipeline.<sup>1</sup> The Federal Energy Regulatory Commission (FERC) relied exclusively on the contracts between these affiliated companies as proof that the project was needed.<sup>2</sup>
- The guaranteed yearly profit for ACP developers is 15%, a rate higher than for any other energy project.<sup>3</sup> Dominion and Duke plan to charge their electricity customers for the cost of building the pipeline *and* the 15% yearly profit.<sup>4</sup> Originally projected at \$4.5 billion, expected project costs have ballooned to over \$7 billion.<sup>5</sup>
- This scheme will generate a long-term, low-risk revenue stream for Dominion and Duke shareholders—even if the pipeline is never used.<sup>6</sup>

## AN OBSOLETE PROJECT

- New evidence shows that the project is *not* needed to run power plants in Virginia. In 2018 and again in 2019, regulators found that Dominion already owns enough pipeline capacity to serve its existing power plants.<sup>7</sup> Also in 2018, regulators rejected—for the first time ever—Dominion’s Integrated Resource Plan, finding that the company’s demand projections “have been consistently overstated.”<sup>8</sup> Dominion’s revised Plan relies on clean, low-cost solar power.<sup>9</sup>
- The market is already pushing utilities away from gas-fired generation. Dominion recently acknowledged that it would not build new combined-cycle gas plants because solar power “offer[s] plentiful and inexpensive electricity.”<sup>10</sup>
- Even if demand for gas-fired power grows, the existing pipeline system can meet it. Since late 2018, two expansions of existing pipelines—the Atlantic Sunrise project and the WB XPress project—have offered more capacity into Virginia and North Carolina than the ACP will. Most importantly, this capacity *is available for Dominion and Duke*.<sup>11</sup>
- According to two FERC commissioners, the ACP is not in the public interest.<sup>12</sup>

## SELF-INFLICTED PERMITTING PROBLEMS

- Since May 2018, federal courts or the federal agencies themselves have vacated or suspended seven permits required for ACP construction.<sup>13</sup> The lack of necessary permits forced Dominion and Duke to halt all ACP construction indefinitely in December 2018.<sup>14</sup>
- The ACP’s permitting problems are entirely self-inflicted. The route—across a national park; two national forests; and the steep, forested mountains of the central Appalachians—poses serious environmental problems and has been unduly risky from the beginning.
- Dominion and Duke plan to put an ACP compressor station in the historic, African-American community of Union Hill, Virginia, which was founded by Freedmen and Freedwomen after the Civil War. Descendants of those founders still live there today.<sup>15</sup>
- Dominion tried to use politics and influence to get ACP permits.<sup>16</sup> Acting at the company’s request, political appointees applied intense pressure on federal agencies to authorize the pipeline over the objections of agency scientists and engineers.<sup>17</sup> That approach backfired when a federal court reviewed those permits.
- The ACP’s certificate from FERC—the project’s central approval—is still the subject of litigation in federal court. That case may expose even more problems for this project.

(Over, please)

Or contact Jonathan Gendzier at [jgendzier@selcva.org](mailto:jgendzier@selcva.org) • 434-977-4090.

- FERC has not approved ACP construction in Virginia, and Dominion and Duke have installed less than 6% of the entire project, mostly in West Virginia.<sup>19</sup>
- Despite the ACP's highly uncertain future, property owners have forfeited their land in eminent domain proceedings, and Dominion and Duke have incurred almost \$3 billion in costs.<sup>20</sup>

## CONGRESS: NO SPECIAL TREATMENT FOR THE ACP

- In December 2018, the Fourth Circuit vacated a permit from the U.S. Forest Service for the ACP, ruling that the agency did not have legal authority to allow the pipeline to cross the Appalachian Trail.<sup>21</sup> Dominion and Duke now want Congress to change the law.
- Congress should not inject itself into the ongoing review of this highly controversial project at the agencies and in the courts. The ACP's final route is *unknown* at this point. The Fourth Circuit ruled that the Forest Service must study alternative routes that avoid national forests, a process that may significantly reconfigure the project.<sup>22</sup> And other cases—like the challenge to the FERC certificate—are still in court.
- The ACP has other options. The Fourth Circuit ruling is specific to Appalachian Trail crossings on federal land and does not limit crossings on state or private land. Other new pipelines, like a 2016 Transco expansion, crossed the Trail on state or private lands.
- The Fourth Circuit's ruling does not affect the 55 existing oil and gas pipelines that cross the Appalachian Trail at 34 separate locations. Those crossings are either (i) on state or private land or (ii) on land owned by the National Park Service subject to property rights that predate federal ownership or the creation of the Appalachian Trail.<sup>23</sup>
- No existing pipeline crosses the Appalachian Trail on land owned by the Forest Service. Its recent approvals for the Mountain Valley and Atlantic Coast Pipelines were unprecedented.
